MANAGEMENT

Thehan Andaramana: CB015685

Thumula Rumesh: CB015674

Sadev Ravishan: CB015733

Sivakumar Sabeeshan: CB011535

What is proposed?

Altrium's sales and project information can become difficult to manage when company details, contacts, leads, customer interactions, project activities, and approvals are maintained across different sources. This makes it difficult to track lead status, monitor project progress, maintain interaction history, and provide management with a clear view of the sales and project pipeline. The proposed solution is a **Customer Relationship Management (CRM) system** that centralizes companies, contacts, leads, interactions, projects, phase tasks, approvals, dashboards, and management information. The system uses role-based permissions so that each user can access and perform actions according to their responsibilities.

Project Objective	Deliverable
Company & Contact Management	• View and manage company records according to user permissions. • Add and update contacts associated with companies. • Assign or change company ownership where authorized. • Maintain company and contact records linked to CRM activities.
Lead Management	• Create leads linked to companies and optionally contacts. • View leads according to role-based permissions. • Assign leads to Sales Representatives. • Update lead information according to role permissions. • Archive leads through the controlled archive workflow.
Customer Interaction & Activity Tracking	• Log calls, meetings, emails and notes. • Record interaction outcomes. • Link interactions to relevant leads and contacts. • View the combined activity timeline. • Mention users and reference project tasks where required.
Lead Qualification & Status Management	• Display HOT/COLD lead status. • Allow authorized managers to change lead status with a reason. • Allow Sales Representatives to request status changes. • Allow authorized users to approve or reject status-change requests. • Configure the cold-lead threshold.
Project Lifecycle & Phase Tasks	• Automatically associate a project with a lead. • Manage the project's controlled phase lifecycle. • Assign Project Managers to projects. • Complete and record phase tasks. • Record task notes, forms and attachments. • Track task due dates and overdue work.

	• Manage project execution status where authorized.
Phase Sign-off & Approval Management	• Request phase sign-offs after required work is completed. • Review, approve or reject sign-off requests according to role permissions. • Prevent users from approving their own requests. • Advance projects only after the required approval. • Apply the Executive Manager approval rule for Phase 4 sign-off.
Requirement Templates	• Create and manage project requirement templates. • Create, edit, reorder, copy, activate and deactivate templates. • Configure standard task structures for new projects.
Visual Project Pipeline	• Display project cards grouped by their current phase. • Reorder project cards within a phase. • Prevent board reordering from directly changing the project's phase.
Search & Filtering	• Search company and lead records. • Filter leads by status, phase, Sales Representative and Project Manager. • Sort displayed records where supported.
Calendar & Task Scheduling	• Display relevant task due dates and statuses in a calendar. • Identify upcoming, due-soon, overdue and completed tasks.
Dashboards & Operational Monitoring	• Provide role-based dashboards. • Display relevant leads, projects, approvals and overdue work. • Provide team-level information for management users.
Management Reporting	• Generate management reports for a selected period. • Review project, approval and interaction activity. • Export report data for use outside the CRM.
System Administration & Settings	• Apply Role-Based Access Control across the system. • Configure the cold-lead threshold. • Manage requirement templates according to permissions. • Maintain activity and system records. • Allow authorized hard deletion of archived records.
Personal Preferences & Notifications	• Allow users to manage personal display preferences. • Support theme, font size and interface density settings. • Support relevant notifications and user mentions.

Who are the End Users? How Does your solution address their needs?

End User	How the solution addresses their needs
Sales Representative	• Views relevant companies, contacts and leads. • Creates leads where authorized. • Logs customer interactions. • Views HOT/COLD lead status. • Requests lead status changes when required. • Completes assigned project tasks. • Requests phase sign-offs. • Views personal dashboard and relevant overdue work.
Sales Manager	• Manages companies, contacts, leads and projects according to permissions. • Assigns lead and company ownership. • Changes HOT/COLD lead status with reasons. • Reviews and approves relevant requests. • Assigns Project Managers. • Manages requirement templates. • Monitors team dashboards, projects, approvals and overdue work. • Generates management reports.
Executive Manager	• Performs management functions across CRM records. • Reviews team and business information. • Approves relevant requests according to the workflow. • Decides Phase 4 sign-off requests. • Reviews management dashboards and reports. • Configures relevant system settings where authorized.
Project Manager	• Views CRM records relevant to project delivery. • Manages assigned project work. • Completes and confirms applicable phase tasks. • Records task information, forms and attachments. • Manages relevant execution status. • Requests phase sign-offs for assigned projects. • Tracks project tasks and due dates.
System Administrator	• Maintains system-level configuration according to permissions. • Manages requirement templates and system settings where authorized. • Has read access to system records. • Supports controlled administrative operations. • Can hard-delete already archived records where authorized. • Supports system-level access and configuration management.

User Personas – Identify personas for your end users

Persona 1: The Sales Representative

Name: Ravindu Perera

Age: 26

Education: Bachelor's in Communications

Occupation: Sales Representative

Tech Literacy: Medium-High

Bio

Ravindu manages multiple prospects and regularly communicates with customers through calls, meetings, emails and other communication channels. He needs to maintain accurate lead information while completing daily sales activities.

Core Needs

- Needs one central location for company, contact and lead information.
- Needs to quickly view leads requiring attention.
- Needs to record customer interactions.
- Needs to complete assigned project tasks.
- Needs to request approvals without bypassing the defined workflow.

Frustrations

- Customer information can become difficult to track when stored across different sources.
- Manual status updates can cause important leads to be overlooked.
- Missing interaction history makes it difficult to understand previous customer communication.

Persona 2: The Sales Manager

Name: Rashmi Senanayaka

Age: 38

Education: Master's in Business Administration (MBA)

Occupation: Sales Manager

Tech Literacy: High

Bio

Rashmi manages a sales team and monitors the overall sales pipeline, team workload and customer activity.

Core Needs

- Needs team-wide visibility of leads and projects.
- Needs to manage lead ownership.
- Needs to control lead status changes.
- Needs to manage standard project task templates.
- Needs dashboards, approvals and reporting information.

Frustrations

- Limited visibility into team activities.
- Difficulty identifying inactive or problematic leads.
- Time spent collecting information manually for management reporting.

Persona 3: The Executive Manager

Name: Tharidu Balasooriya

Age: 48

Education: Master's in Finance

Occupation: Executive Director / VP of Sales

Tech Literacy: Medium

Bio

Tharidu focuses on high-level business decisions and requires concise information about the organization's sales and project pipeline.

Core Needs

- Needs high-level pipeline and management information.
- Needs access to relevant dashboards and reports.
- Needs to review approval requests.
- Needs to make Phase 4 sign-off decisions.
- Needs visibility of important business activity.

Frustrations

- Large amounts of operational information can make high-level review difficult.
- Delayed reporting can affect management decisions.
- Lack of centralized information can make pipeline monitoring difficult.

Persona 4: The Project Manager

Name: Kushan Hewanila

Age: 34

Education: Bachelor's in Information Technology, PMP Certified

Occupation: Project Manager

Tech Literacy: High

Bio

Kushan manages project activities after a lead progress into the project lifecycle. He needs clear visibility of project tasks, due dates, requirements and approvals.

Core Needs

- Needs access to project and customer history.
- Needs to manage assigned project tasks.
- Needs to record task notes, forms and attachments.
- Needs visibility of task due dates and overdue work.
- Needs to request phase sign-offs when work is completed.

Frustrations

- Poor handover information can make project delivery difficult.
- Unclear requirements can lead to misunderstandings.
- Missing task information can make project progress difficult to track.

Persona 5: The System Administrator

Name: Kawushani Jayarathna

Age: 31

Education: Bachelor's in Cybersecurity & Network Engineering

Occupation: System Administrator

Tech Literacy: Very High

Bio

Kawushani is responsible for system-level configuration, access control and maintaining appropriate administrative settings.

Core Needs

- Needs role-based access control.
- Needs visibility of system records and activity.
- Needs to manage system settings where authorized.

- Needs to manage requirement templates where authorized.
- Needs controlled administrative deletion of archived records.

Frustrations

- Incorrect permissions can expose records to unauthorized users.
- Inconsistent system configuration can affect workflows.
- Lack of activity information can make administrative investigation difficult.
